## About E-Z Audit

First released in 2001, E-Z Audit is in use by over 12,000 companies, government, educational, non-profit and charity users and IT service providers worldwide as of January 2010.

Our customers range from small companies with little or no dedicated IT staff to global enterprises with tens of thousands of PCs spread over dozens of locations.

E-Z Audit performs comprehensive PC software and hardware audits via your network, from a USB flash drive or of non-networked users via E-Z Audit Remote.

You can audit via your network on a schedule, whenever one of your PCs is logged in “on demand”, or only “on demand” with the included E-Z Audit On-Demand tool.

You can also audit non-program files such as music, video, images or documents.

E-Z Audit does not require any dedicated equipment, changes to firewall settings, changes to Remote Registry, or installation of any software to client PCs or the server.

## Supported Systems:

You can audit Windows based PCs from Windows 95 through Windows 7.

The server where you ‘host’ the audit modules for network auditing (no installation, just a simple file-copy of two small .exe files), can be Windows NT4 SP6 through Windows Server 2008.

Your PC, where you install the E-Z Audit package to view, manage and export audit data can be Windows 2000 SP4 through Windows 7.

You do not need any SQL or variant database programs on your PC, nor do you need to on the server where the audits are performed from. It’s very lean and very easy.

## Minimum Requirements:

### For your PC where you install E-Z Audit (the “admin PC”)

1 GB of RAM, 1 GHz processor, 1024 x 768 resolution, Windows 2000 SP4

### For PC’s being audited:

E-Z Audit has been successfully tested down to a virtually non-existent level today of 64MB of RAM with a 100 MHz processor.

More is faster, but as you can see, it will perform even on very minimal equipment.

Windows 95, 98 with Internet Explorer 5 or higher, NT4 with SP6 and Internet Explorer 4.01 or higher, Windows 2000, 2003, Vista and Windows 7.

### **Installation and deployment:**

Your only required installation is to your PC from [www.ezaudit.net/download](http://www.ezaudit.net/download) This package contains the admin console and the .exe files that you will copy to your server. Our licensing allows it to be installed at as many PC's as you may require – for example for you and your Tech Support staff.

**From download to ready-to-audit can easily be under 30 minutes.** Concise and easy steps are in our **Quick Start Guide** at [www.ezaudit.net/guide/pdf/quickstart.pdf](http://www.ezaudit.net/guide/pdf/quickstart.pdf)

Technical questions prior to registration/purchase: [eval@ezaudit.net](mailto:eval@ezaudit.net)

We are headquartered in Stamford, CT USA and have a European office in Zurich, Switzerland.

We do not publish a phone contact because quite simply it would be flooded with marketing calls and requests for assistance that are more effectively and economically handled via email. This keeps our costs down and your prices low.
